

Client: Candy and Candy

Location: London

Sector: Commercial

Project value: £100,000, £350,000

Project: Current and Previous Head Offices

## Brief

We have carried out services based build and fit out installation, on Candy and Candy's current and previous head offices in the West End of London. Both projects were carried out as part of a team with principal and other specialist contractors. The works required a very high finish due to the client's buildings and also had the added complication of being within Grade II listed buildings, with limited space constraints available for the services installations and other constraints associated with buildings of this type.

## Action

All services works were coordinated by JCA who worked closely with the principal contractor and client design teams to ensure that a high quality installation was achieved. Works were carried out on time and budget and to a very high standard.

## Outcome

The successful outcome of the first project with this client meant that we were invited to tender and carry out the second project, as indicated above. We have also developed an ongoing relationship with the principal contractor on projects of a similar nature where a high level of service and understanding of clients' requirements are necessary.
